* Discover alternatives to Photoshop in Chapter 3. * See Chapter 8 for plenty of help with the basics of using Photoshop. * See Chapter 11 for help with layers. * Other chapters of this book will help you know where to find advanced features. I'll give you tips for how to use Photoshop efficiently, including saving time, finding and inserting objects, using blend modes, and more. As you use Photoshop, you'll see new features and ideas to try. # 7. Burning Video Clips In Chapter 1, you looked at how you can add audio and background music to your video clips using Adobe's built-in tracks. If you want to include a soundtrack with your video, you'll still have to use that method. (If you want a complete and easy guide to creating audio and video, check out _Quick Start Visual Quicktime Pro_ by Jen Lee and Mark Mayfield, published by Wiley Publishing, Inc. For a quick-start guide for Premiere Pro, check out the sample chapter from Apple's _Premiere Pro for Video Creation_.) The method in this chapter is different. Instead of adding a background music track to a video and then adding effects to that track, you'll lay down the entire soundtrack right into the video. So you're not adding a visual effect to your music, you're adding the music as a complete visual effect. For instance, let's say you want to create a musical video that starts off with a beat and then jumps into a slow-motion guitar solo. You don't want to have to create a musical background and then slap a slow-motion effect on top of it. With this method, you can create a digital audio track that will go into the video clip and then apply a special effect to it so that the audio track is slowed down before being sped back up and then fading out. By taking the audio track out of the video file itself, you can add this effect at any time in the future. If you want to make a cameo for a musician in your video, you can duplicate the effect track and edit it as you do to the original. (Not only that, you can easily make a sequence in the video file that matches the timing of the music track.) In this example, you'll take a short video clip, animate an object in that video to match a beat, and then use the Audio Overlay feature to slowly play the music over top of the video

According to Adobe, Photoshop Elements is the most popular program for image-editing, and "seems to be the only program that actually works better for professionals than it does for novices." (1) It's also really easy to use and has a very minimal learning curve. Photoshop Elements won't replace Photoshop for most people. But many people use Photoshop Elements and Photoshop together. In this tutorial I will show you how to use Photoshop Elements to edit your images, add and create textures, draw on photos and create graphics for websites and presentations. We'll go over the Photoshop Elements interface, the functions of each tool, and how to use it to edit your images. Step 1: Download Photoshop Elements We recommend downloading Photoshop Elements from Adobe's website (2). If you don't want to go through the Adobe website, you can download it from the Mac App Store (3) or from the Microsoft Store (4). Step 2: Install Photoshop Elements The first time you run Photoshop Elements you'll have to install it. Click the Download Now button and Photoshop Elements will start the installation process. You'll see a text-based installer. To install Photoshop Elements, just click the Install button. The installation process will take less than two minutes if you're using a current version of macOS (5). If you have an older version of macOS, then it can take up to three times longer to install Photoshop Elements. It is better to download and install Photoshop Elements from the beginning instead of the update installer. Make sure you accept the EULA in the setup program (6). This is not required for personal use. After the installation process is finished, click the Open button to open Photoshop Elements. Step 3: Choose Your Photo Before we start editing, it's best to choose a photo to edit. Use the View menu to switch to Photos, or press Command + 1. The choice of what kind of photos to open is under the Working With menu and depends on the template you installed. Step 4: Choose a Tool Go back to the Toolbox and choose a tool, drag it on the image, and drop it on a convenient part of the photo. It is usually best to pick a tool that has a magic wand icon 388ed7b0c7

Q: Event listener does not work properly To bind some events, for example when double-clicking on an svg element, I need to listen to Event::DblClick from the OpenLayers library and modify the OpenLayers map. function setListeners(){ map.events.register("dblclick", map, function(e){ e.preventDefault(); //code }); } The problem is that when I bind the event, the function is called everytime the finger is touched on the map which is not the case. Also, when I debug the order of the event, it stops at a point where it is supposed to start again. What is the cause of this problem? A: From the docs: Event handlers are executed immediately when a triggering event occurs. If no such handler exists for an event, that event will not be handled by the library. So your code may be called before the event occurs. Perhaps setListeners should move the code for registering events into the event handlers themselves. A friend who is an employee of the distance learning center in Ukraine, Stakhanov, passed us her story and thought that it was worth sharing with you. The eventful evening My friend and I were sitting in the waiting room of a big city when our group arrived. There were around 30 students and about 20 teachers. As we walked in, our eyes were meeting for the first time. Both of us told ourselves: "I have never met such adorable boys in my whole life". The evening started really well with an emotional dance performance of Ukrainian folk dance, the second duet of Odessa Symphony. Then we listened to motivational speeches of our teachers, who also performed on stage. Both of the teachers had something special in them. I will tell you about them in the next paragraphs. First of all, I would like to introduce our distance learning center Stakhanov in Ukraine: Our team has a pretty large number of highly professional teachers. Our teachers are always ready to give important messages not only for the parents but also for the children
